NAV-IQ APP

ELEVATE YOUR DRONE CONTROL
WITH OUR POWERFUL SOFTWARE

KEY FEATURES

The GCS PC application - NAVIQ MCS is a highly advanced powerful mission control tool, offering the operator simple and straightforward control of unmanned vehicles and other systems.

The NAVIQ-MCS main display is divided into three portions:

●Digital map – the digital map displays the air vehicles which are currently active (The RD-MCS GCS can control more than one UV simultaneously), and other objects such as flight zones, routes, recovery points, targets, and payload trace. The operator can select different maps to be displayed, satellite topographic or tactical maps, and can zoom in and out on each map.

●Video display

●Operation control status information

The NAVIQ-MCS offers easy mission interrogation using the mission playback tool. The complete mission, video and telemetry data is saved on the PCs hard drive. Using the playback tool, the user can play the video forward and backwards, go to a certain point in the mission, and play in slow motion having all telemetry information available.
